Laser Cellulite Reduction

.....

Bare It All Again

- You've tried everything to get rid of cellulite.
- Ready to try the one treatment that attacks its very structure?

Cellulaze™

Cellulaze™ reduces the appearance of cellulite in just one treatment

Cellulite isn't a fat problem; it's a structural problem *below* the skin, and that's not your fault. So why do so many cellulite treatments focus on treating fat from *above* the skin? Only Cellulaze attacks the brittle structural bonds beneath the skin that are the real cause of cellulite's dimpled appearance. And Cellulaze increases your skin's natural depth for a smoother, healthier look that lasts. All from just one simple treatment.

Cellulaze Your Cellulite. Because you can't look like new in the same old skin.

"I struggled to get rid of my cellulite. Cellulaze really works! I could see the difference."
— Nelda O.

You've tried diet and exercise.

No matter how many pounds you lose or how often you frequent the gym, cellulite may still be a problem. It's not your fault, since diet and exercise can't address the fibrous bands that pull down on the skin and cause that dimpled appearance of cellulite.

You've tried creams and massage.

No matter how many lotions or creams you try, you can't seem to get rid of it. That's because creams only work superficially, on the surface of the skin. To make matters worse, you have to apply them constantly or your cellulite returns.

You've tried hiding it.

Covering up has been the only way to conquer cellulite. Until now: Cellulaze™ can treat what was once considered untreatable.

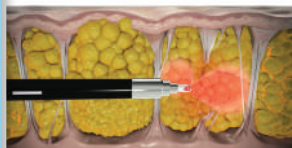

Ready
to get **results** that
last?

Cellulaze is a unique treatment that uses laser energy to:

Disrupt trapped pockets of fat

Release fibrous bands that pull down on the skin

Stimulate collagen growth, for thicker, more elastic and healthier looking skin

FAQs

How Does Cellulaze™ Work?

A very small cannula (or tube about the size of the tip of a pen) is inserted under the skin. Cynosure's unique SideLight laser fiber inside the tube delivers energy directly under the skin. This increases the depth and quality of your skin, while simultaneously releasing the fibrous bands that pull it down—minimizing the orange peel look associated with cellulite. Finally, the laser is used to diminish the lumpy pockets of fat that protrude through the fibrous bands under your skin.

How do I know if Cellulaze is right for me?

Cellulaze delivers the best results for women who are not significantly overweight but have mild to moderate cellulite on their thighs. Talk to your Cellulaze physician to discuss your needs.

What does the procedure feel like?

Because the area is numbed with local anesthesia, there is minimal discomfort during the procedure. You may feel a light pressure. Following a Cellulaze treatment, you may experience some soreness, but you will be able to return to your normal activities in a day or two.

I've tried everything to get rid of cellulite. How do I know Cellulaze really works?

Cellulaze is backed by two years of clinical research. Studies have shown that it increases the thickness of your skin by 25% and the elasticity of your skin by 29%—significant claims that haven't been made by any other treatments.¹ Thicker and more elastic skin can help flatten and smooth the skin's surface to improve the appearance of cellulite.

How long do the results last?

You'll see some improvement right away with optimal results apparent between 3-6 months. Since new collagen is formed in the areas treated with Cellulaze and the structures under the skin are altered... results are lasting. Clinical studies have shown results can last for one year or more. However, it is important to maintain a healthy diet and exercise regimen to continue to enjoy the excellent results.

Cellulaze results.
